

**ME-TL3000-D**

## 3 Ton Telescopic Loader

ME-TL3000-D is a diesel telescopic loader in the 3,000 kg maximum-lift class for stacking, bale handling and elevated loading.

### Confirmed and Configuration-Based Specifications

| Parameter                 | Value                              |
|---------------------------|------------------------------------|
| Maximum lift class        | 3,000 kg                           |
| Power type                | Diesel                             |
| Machine type              | Telescopic boom loader             |
| Lift height and reach     | Confirm required working position  |
| Attachment and hydraulics | Configuration options available    |
| Final load chart          | Issued for confirmed configuration |

### Configuration and Order Confirmation

Final specifications depend on the selected engine, battery, emissions package, cab, tires or tracks, hydraulics, attachments, controls and destination-market requirements. The formal technical offer and signed order confirmation take precedence over this overview.

### Request a Technical Offer

Send the working application, required capacity or width, site conditions, attachments, destination country and expected quantity to [sales@merimachinery.com](mailto:sales@merimachinery.com).

Document status: Product-family technical overview. Verify every final value against the confirmed production configuration before purchase, resale, compliance submission or operation.
